

Connection Dialog

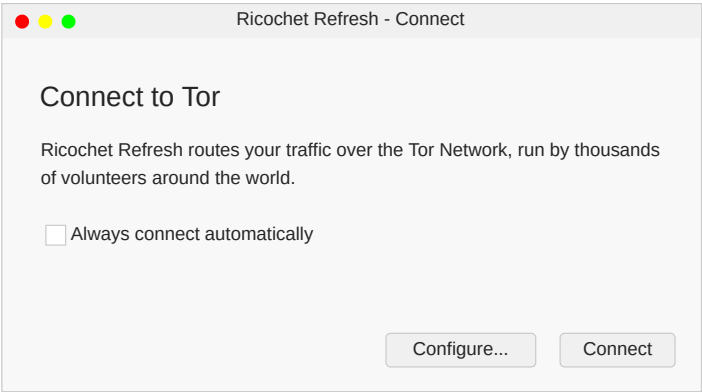

This is the first window that will appear if Ricochet Refresh is managing its own Tor provider (versus using a system-owned Tor or Arti instance). If we are using an external Tor provider, we will go directly to the Main window.

Potentially multiple profiles using the same guard is probably the least-bad option.

There is a linkability concern here: if an adversary disabled a guard node and multiple Ricochet Refresh users go offline, then they have (probably) identified their guard node, and that the two profiles (may) be the same person. Maybe not terribly useful for a fishing expedition (since if we have more Ricochet Refresh users than there are guard relays, there will necessarily be profiles sharing guards), but more useful as a piece of evidence to add to a larger case, especially if this behaviour is stable across multiple guard rotations.

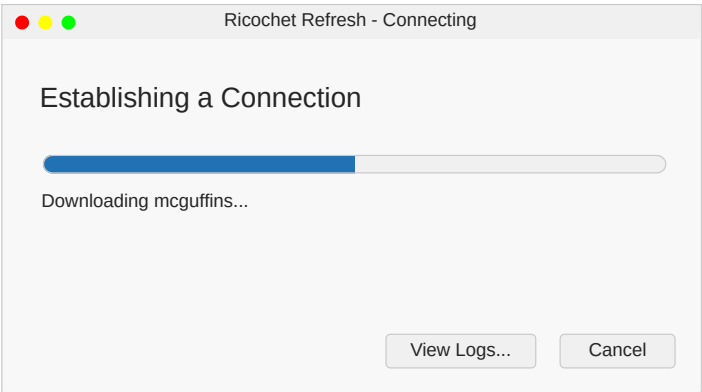

On the other hand, if you say ok one guard per profile, then you run into the problem having a stable guard solves: increased probability of a bad/adversarial guard versus a good guard.

We will try to follow a desktop'ified version of Tor Browser's [about:torconnect](#) page here

Configure opens the Preferences dialog

Connect begins bootstrapping tor

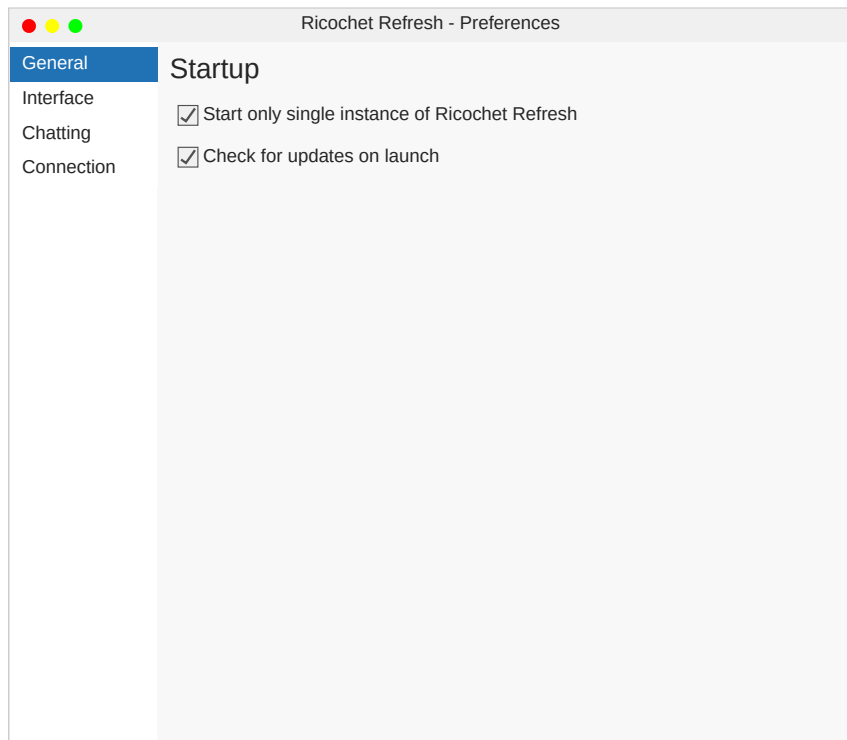

Open the Tor Logs dialog

Cancel current bootstrap attempt

Preferences (General) Dialog

The General section of the Preferences dialog. Should enable configuring general application behaviour that are not specific to the other sections.

All options in this dialog must be safe to store un-encrypted in the application config; no privacy or security related settings belong here! Those must be saved in the profile itself.

Preferences (Interface) Dialog

The Interface section provides users with UI customisation options

TODO:

Chatting

Connection

Logging

☒ Enable conversation logging

☒ Display conversation scrollbar

Scrollbar lines:

1000

Logs are stored in the encrypted profile file

Timestamps should be stored in un-localised format

Preferences (Connection) Dialog

The Connection section provides users with Tor Provider related options. This page may vary a lot depending on which Tor Provider is selected. For instance, a System Tor Daemon Tor Provider (eg on Tails) would have this section almost entirely empty. For now let's have this mostly mirror about:preferences#connection in Tor Browser.

TODO: Bridge Card support

General

Interface

Chatting

Connection

Quickstart

Quickstart connects Ricochet Refresh to the Tor Network automatically when launched, based on your last used connection settings

☒ Always connect automatically

Bridges

Bridges help you securely access the Tor Network in places where Tor is blocked. Depending on where you are, one bridge may work better than another

☒ Use Bridges

Add bridges

☒ Chose from one of Ricochet Refresh's built-in bridges

☒ obfs4

Makes your Tor traffic look like random data. May not work in heavily censored regions.

☐ Snowflake

Routes your connection through Snowflake proxies to make it look like you're placing a video call, for example.

☐ meek-azure

Makes it look like you're connected to a Microsoft website, instead of using Tor. May work in heavily censored regions, but is usually very slow.

☐ Enter bridge addresses you already know

Paste your bridge addresses here

Network Settings

☐ I use a proxy to connect to the internet

Proxy Type

SOCKS5

Address

IP address or hostname

Port

Username

Optional

Password

Optional

☐ This computer goes through a firewall that only allows connections to

Allowed Ports

80,443

Advanced

View the Tor logs

View Logs...

Backend

Select which Tor client implementation to use. Changing requires an application restart.

☒ Out-of-Process Tor daemon (default)

☐ System Tor daemon

☐ In-Process Arti

Add bridges region collapses if Use bridges is not ticked

TODO: Maybe Backend should be the *first* configurable item in the list?

Tor Logs Dialog

Provide logs from the underlying Tor Provider. This dialog should match layout of Tor Browser's about:preferences#connection Tor Logs dialog. Some Tor Providers will not have logs to display (eg System Tor Daemon)

Main Window

Users reach this window after bootstrapping via the Connection dialog, or directly if the Tor Provider does not require explicit bootstrapping (eg System Tor Daemon). A password is required to decrypt a Ricochet Refresh profile. Obviously we draw a lot of inspiration here from KeyPassXC and friends.

TODO: Downloads dialog

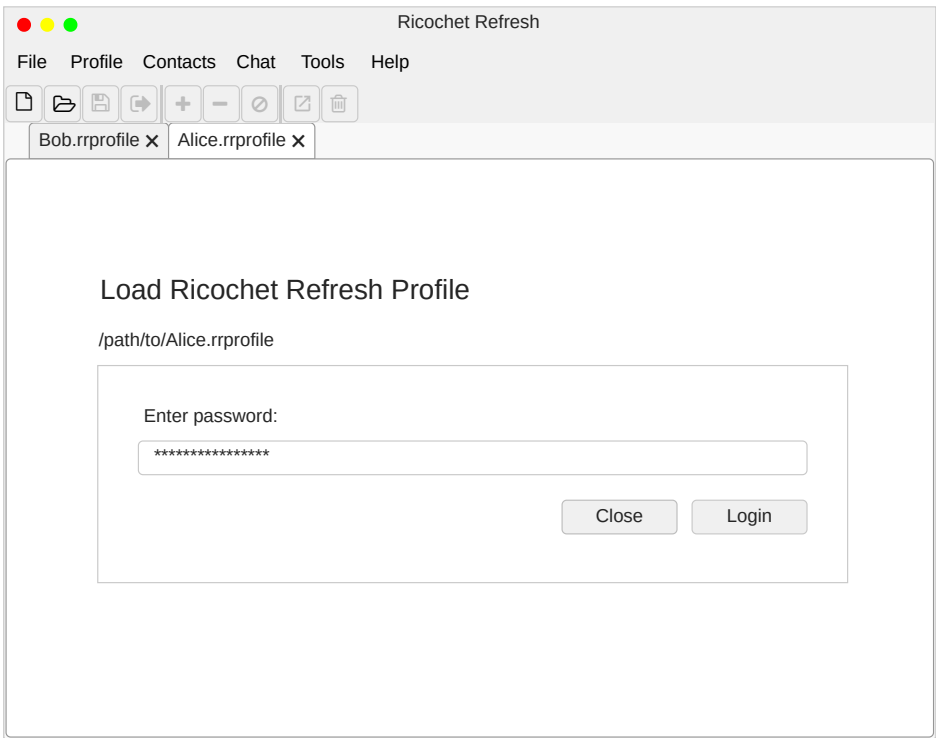

Menus

File:	Profile:	Contacts:	Chat:	Tools:	Help:	
- New Profile	- Set Visibility >	- Add Contact...	- Export Logs...	- Downloads...	- Manual	- Licenses menu option
- Open Profile...	- Online	- Delete Contact	- Delete Logs...	- Tor logs...	- Licenses...	should open a folder
- Close Profile	- Restricted	- Connect/Disconnect		- Preferences...	---	containing relevant licenses
- Save Profile As...	- Hidden	Contact			- Check for Updates...	- Changelog menu option
---	- Copy Ricochet Id	- Ban/Unban Contact			- Changelog...	opens CHANGELOG.txt in
- Logout	- Edit Profile...				- About	system default text editor
- Logout All Profiles						

- Quit						

Toolbar Icons

New Profile, Open Profile, Save Profile As, Logout | Add Contact, Delete Contact, Ban Contact, Connect/Disconnect Contact | Export Logs, Delete Logs

Users will always 'login' into the 'offline' state, they will opt-in to less private visibility states

Main Window (Online)

Profile tab when the user is logged in. In 'Online' mode identity and endpoint servers are enabled, anyone can cyberstalk the user if they know the user's Identity Server Service ID

- Hide a conversation by clicking on a user entry again to unselect

- Per-contact context menu will have all the per-contact commands from the Contacts menu

User groups:

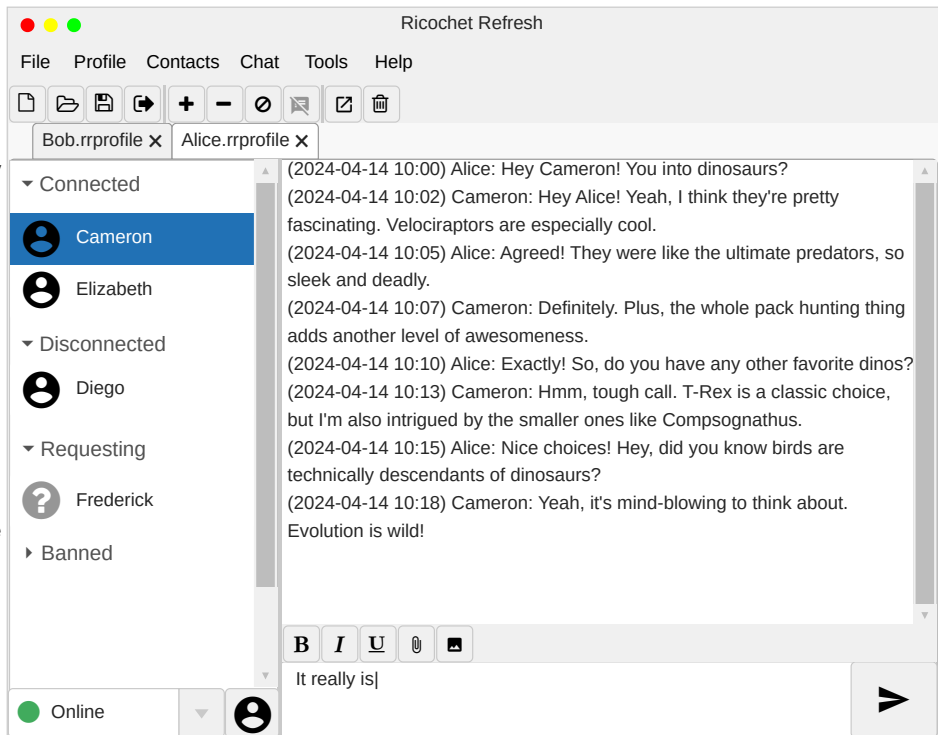

- Connected: users which have connected to our, or which we have connected to their endpoint server

- Connecting: users which we are explicitly attempting to connect to (Hidden mode only)

- Disconnected: no active connection; 'offline' to us

- Requesting: in-progress outgoing friend requests

- Banned: no endpoint server, actively blocking attempts when accessing our identity server

- URLs will never open a browser, only open a context menu with the option to copy the URL to clipboard

- exported conversations should be standardised to avoid leaking user's locale re timestamps, any potential formatting options, etc

- user status (connect/disconnect) messages will appear in chat

TODO: Chat Thumbnail and Image UI; images should have be optionally spoiler'd and have text descriptions

TODO: Chat Attachment UI

TODO: Incoming Friend Request flow

TODO: Edit Profile dialog

Visibility Modes:

- Online: identity and endpoint servers are enabled

- Restricted: endpoint servers are enabled

- Hidden: no endpoints enabled, but outgoing connections can occur

- Offline: no endpoints enabled, no outgoing connections either

Profile button:

Open an Edit Profile dialog where user can:

- get Ricochet id
- set display name
- set profile image
- set profile info
- w/e else metadata users opt into

Minor text formatting:

- Bold
- Italic
- Underline
- Add Attachment
- Inline-image

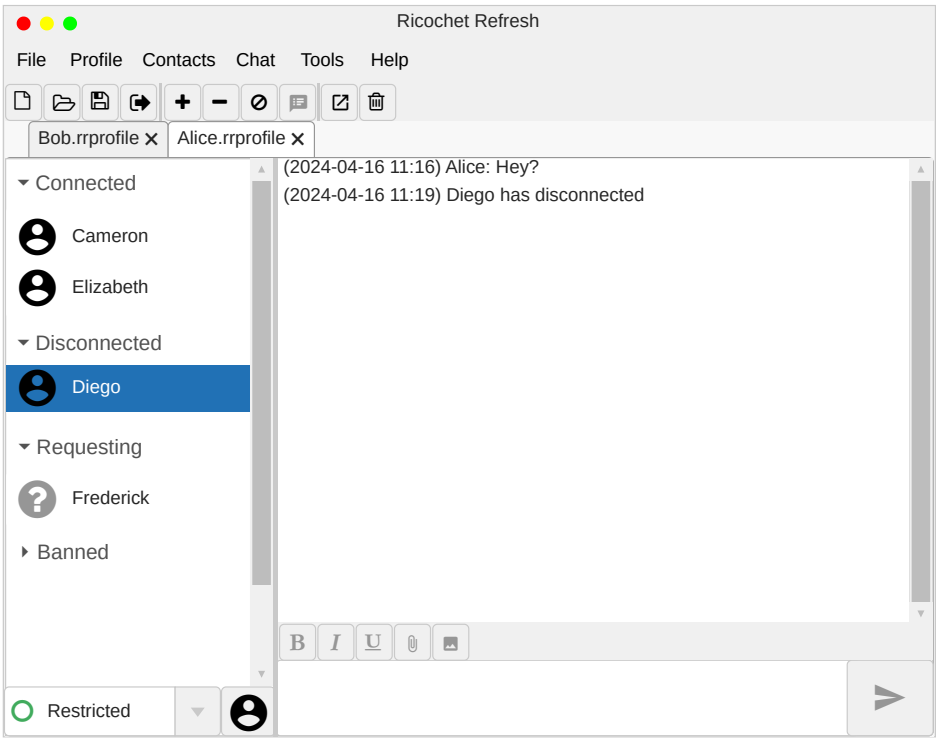

NOTE:

- Attachments are sent as-is, but are not rendered/previewed by the application.
- Inline-images will be somehow re-encoded to hopefully avoid malformed image decoder bugs/exploits

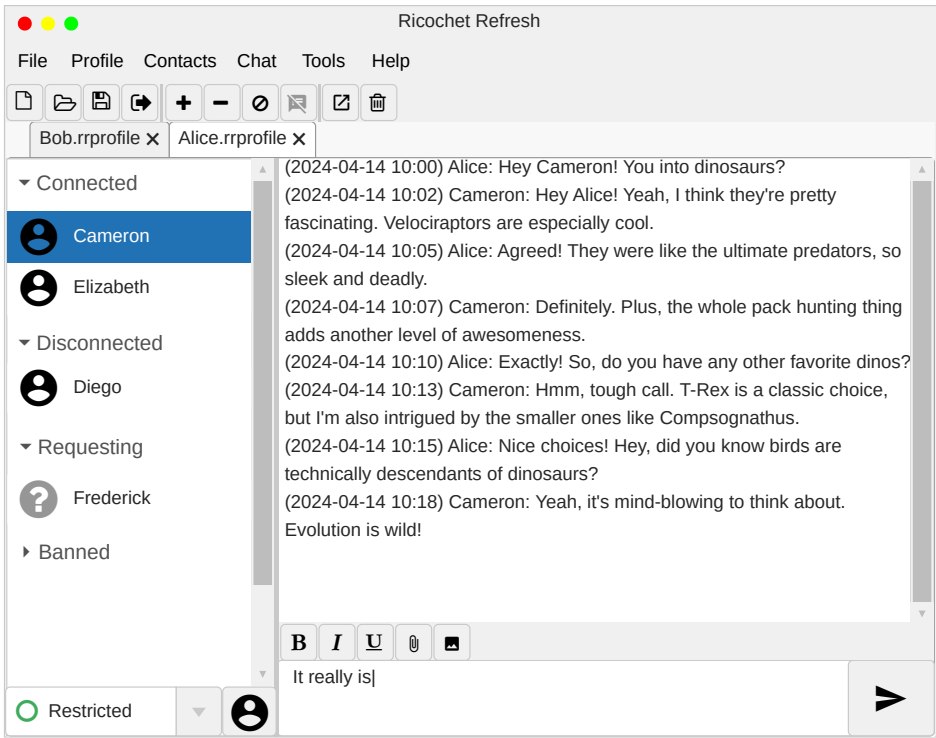

NOTE: Online should really communicate 'most risk', users can be cyberstalked if they always stay in Online mode

Main Window (Restricted)

In 'Restricted' mode (identity server disabled, endpoint servers enabled) only confirmed/allowed contacts may contact us. New contacts will not be able to access the public identity server to get through the gosling handshake to get their own endpoint server. This way strangers will not be able to cyber-stalk a user based off of their (potentially) public identity server. The UX should be identical to Online mode, except the user will never receive new friend requests.

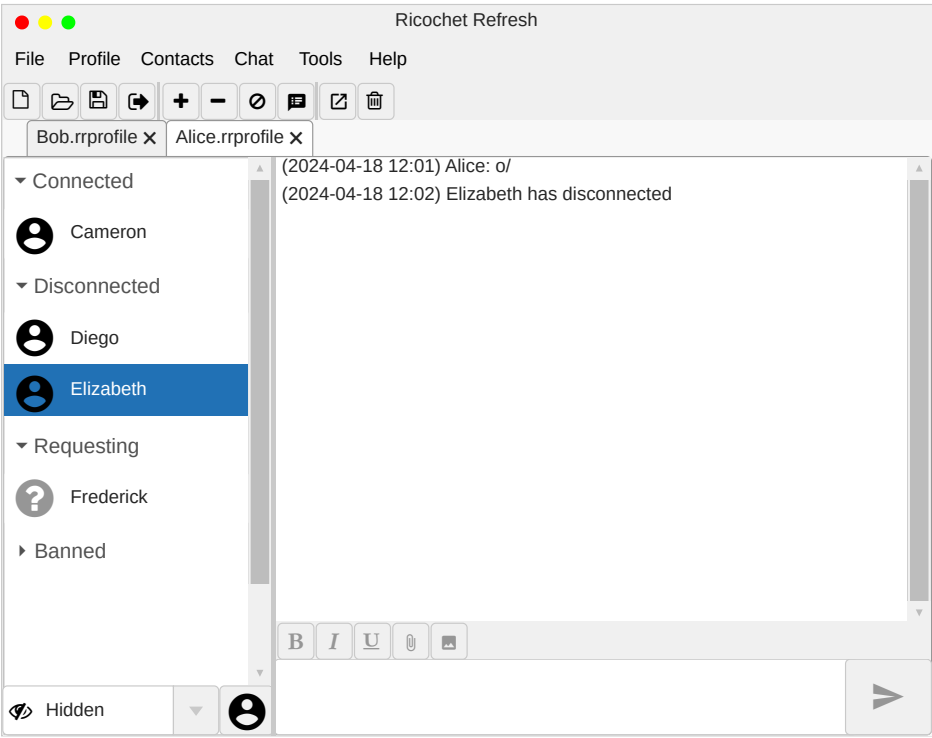

- Chat input widgets are disabled if the user is not connected

Main Window (Hidden)

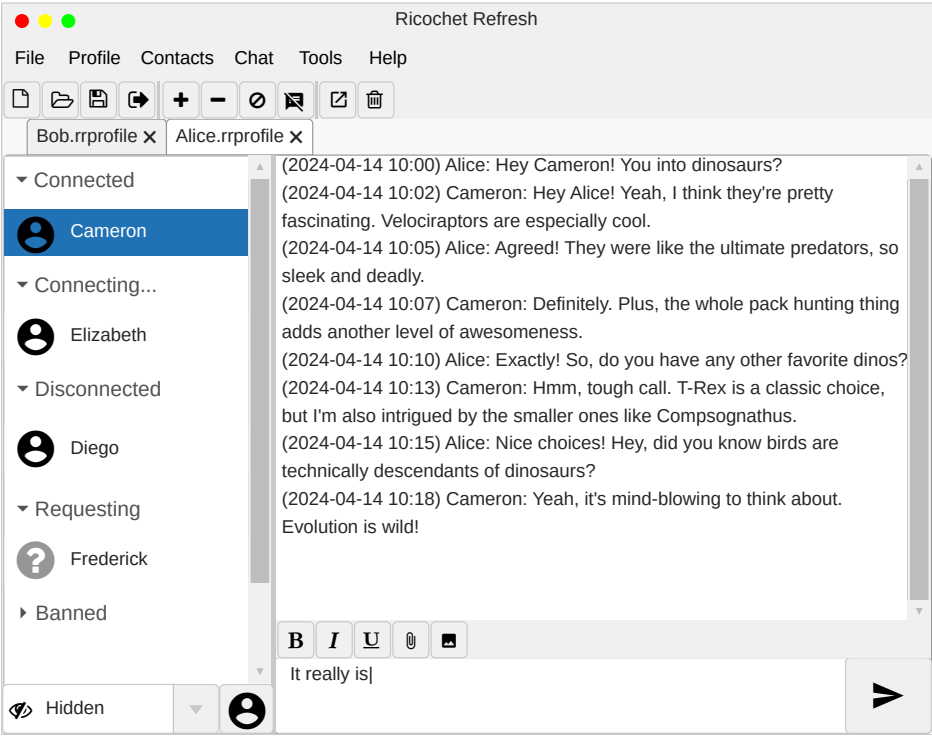

In 'Hidden' mode we do not enable any of our endpoint servers or identity servers, so even contacts do not gain our online/offline metadata. Connections are outgoing only and must be explicitly initiated by the user. This does imply that two users which are both in 'Hidden' mode will not be able to ever connect to each other!

- Chat input widgets are disabled if the user is not connected

- User must opt-in to connecting to contacts when in Hidden mode using the chat icon in the toolbar or connect action in the contacts menu

- Contact goes into Connecting... group when connect is initiated
- Once a user reaches Connected, then chat can happen

New Profile Dialog

Accessed via New Profile button or New Profile... option in File menu. Walks the user through creating a new Ricochet Refresh profile

TODO: We could make the allowed visibility options configurable here, IE maybe I want a profile which *never* runs an onion service (ie is always in Hidden mode)

TODO: We *could* allow legacy contacts to connect to our identity service. Would require re-implementing a subset of the Ricochet Refresh 3.0 protocol

Start

- Generate New: Create a new Ed25519 private key for identity service
- Import: open a user's legacy Ricochet-Refresh ricochet.json profile, import users and add them to the Requesting... set
- From KeyBlob: allow user to just import their private key

TODO: Specifics here will have to depend on profile encryption method + encryption key derivation specifics; maybe we can provide smart defaults/don't need to make it future proof

See KeePassXC new profile flow for examples of things we should potentially provide knobs for; presumably going to use some variant of Argon2 for encryption key derivation, who knows what for encryption (this will also depend on the profile file format which requires some technical investigation work)

Updates Dialog

Accessed via the Help > Check for Updates... menu item. This will open a dialog which pings an onion service for update jsons, which will tell this dialog which install media/package to download.

- Check happens over Tor to Onion Service endpoint
- Will need some to maintain some update jsons

- Ricochet Refresh is up to date so we good

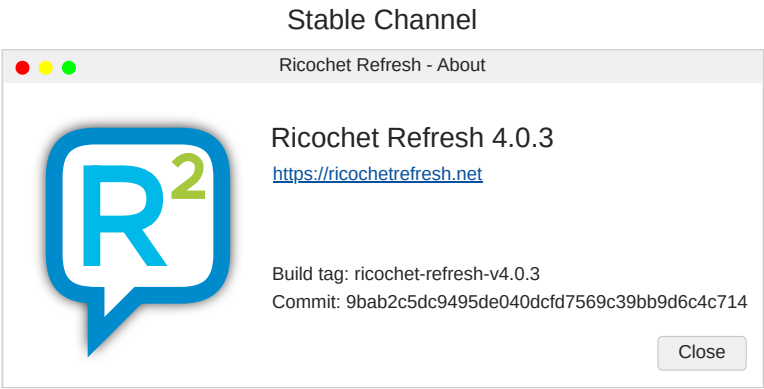

- Download the correct package based on the current installed version (eg a deb, appimage, dmg, windows installer, etc)
- Download button will open Downloads dialog

About Dialog

Accessed via the Help > About menu item. Dialog should show simple version and build info

Like in chats, the URL will open a context menu allowing the user to copy the link to the clipboard

Ensure tag and commit labels are copy-able
